How to use this handbook

Use this guide as a learning aid, not as a substitute for official emergency instructions or expert assessment. Every AI-extracted tip must be reviewed before it is treated as verified guidance. Never infer that a wild plant, mushroom, water source, or improvised material is safe based on appearance alone.

1. Use Adequate Heating Stoves in Cold Environments

Deploy 5–7 kW stoves capable of heating 40–70 m² to maintain indoor temperatures of 15–19 °C, ensuring stability and clean energy use.

Steps

1. Select a stove with 5–7 kW output.
2. Ensure stable installation and proper ventilation.
3. Use clean fuels and monitor for fire risk.

Warnings

• Stove instability can cause fires.

• Poor ventilation can lead to carbon monoxide buildup.

2. Use Alternative Phone Charging During Power Outages

Have backup charging methods for mobile devices when electricity is lost.

Steps

1. Keep a portable power bank
2. Use solar chargers
3. Store extra batteries
